

Preparing EDI Images – with iPhoto on a MAC For WAAC & NEGV Competitions

Important: Save your new image with a different name!

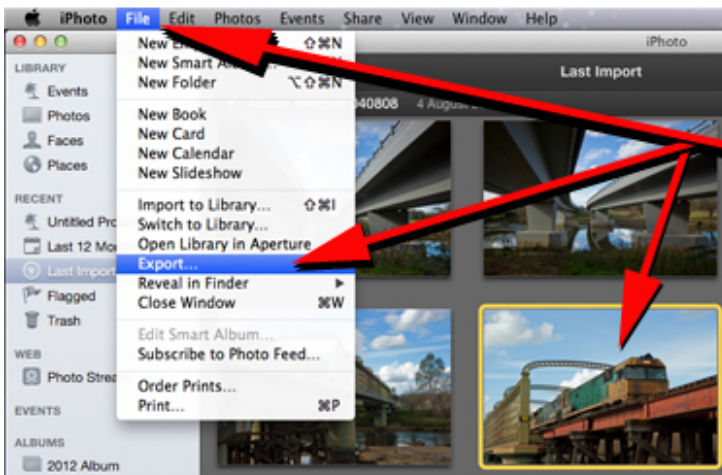

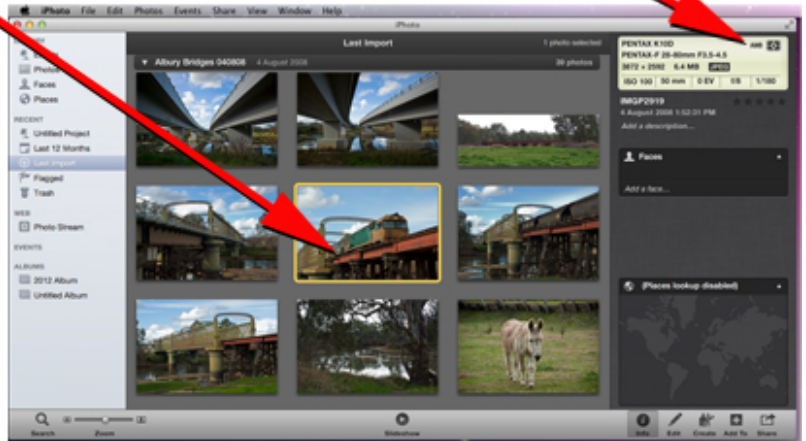

Required Image Specification: 1024 pixels x 768 pixels @ 72 DPI (PPI) Resolution

1. Open iPhoto
2. In the Library, click on the image you want to resize and if the info panel is not shown, click View -> Info.

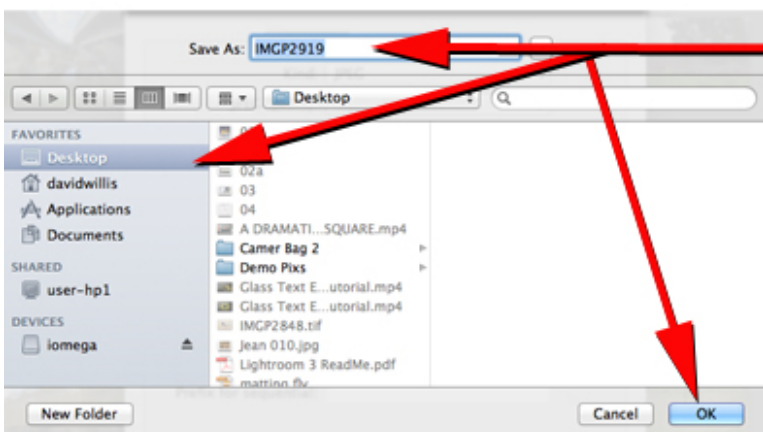

3. The Info panel will display the image size.

4. Select the image go to File -> Export.

5. Ensure Kind is JPEG, Quality is Maximum, Size drop down Menu is Custom. If image is Landscape, select width and enter 1024 px. If Portrait, select height and enter 768 px. Click the Export button.

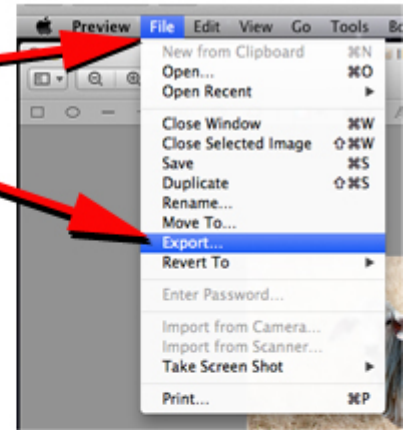

6. On the next Menu enter your image name, selection the location to save it and click on the OK button.

7. Your image has now been resized, however check it in Preview -> Inspector and if the resolution isn't 72 pixels/inch go to page 2.

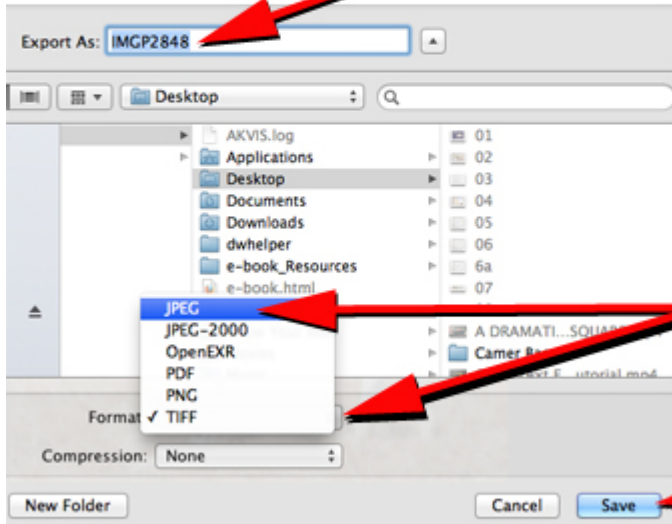

8. Open the resized image in Preview.

9. Select File -> Export.

10. Rename your new Image.

11. From the Format drop down Menu. Select the JPEG format.

12. Click on the Save button.

13. In the next Menu, select Best Quality on the slider and click the Save button.

14. The Inspector will now show the correct file Type (JPEG), and correct size (1024 x 768 pixels) and resolution. (72 pixels/inch).
